

Ultane[®] Security Features

As part of Abbott's ongoing effort to enhance patient safety and combat counterfeiting of prescription pharmaceutical products, Abbott is incorporating security features into Ultane packaging materials worldwide. This transition will require several months to complete. Please exercise normal due diligence prior to dispensing or using existing inventories of Ultane that do not have the new features.

For your security please note:

1. Ultane bottle labels are printed with one of two different color-shifting inks. When viewed at one angle, the ink appears either brown or violet in color depending on the ink used. When changing the viewing angle, the ink gradually changes colors to eventually appear green.
2. You should not accept an Ultane bottle if the ink on the label does not shift colors as described above. Please contact Abbott immediately if you suspect that you have received counterfeit Ultane.
