January 2020

Listen now:

Technological advancements in wearable and implantable devices and remote monitoring continue to transform healthcare. We envision a world where both patients and their doctors have as much data at their fingertips as possible in order to make better, faster and more holistic decisions. In this podcast, our forward-thinking engineers and scientists — people who know that asking “What if?” is the best means to getting to “What’s next?” — discuss the desire our company has to increase not only the length of life but also the quality of those added years.

Innovation in a heartbeat  Ready for more on life-changing technology? Check out our podcast on how the human heart is getting an ultra-modern, hi-tech assist to perform its work, right here.
